General Electric Company  
Appliance Park, Louisville, KY 40225

APRIL 2000

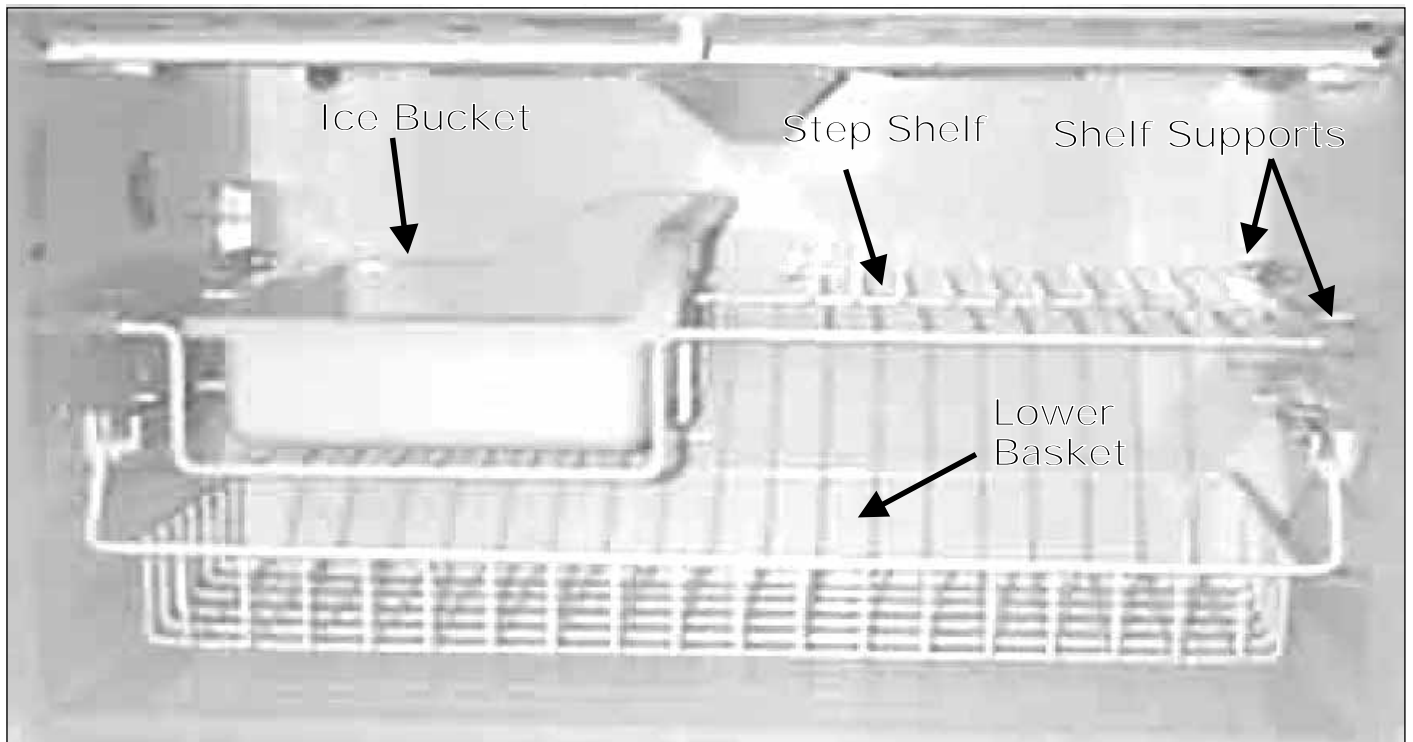

## TCX18 Bottom Mount Freezer Step Shelf Kit

The **TCX18PAC/TCX18IAC** freezer basket assembly was **redesigned to eliminate ice cubes missing the bucket and ice overflow problems** currently seen in the field on these models with IM3 icemakers.

The redesign eliminates the small upper basket and adds a fixed shelf across the top with a step on the left-hand side to accommodate a larger ice bucket. The lower sliding basket was changed slightly to allow for the step shelf. The new design eliminates the inverted ice tray shelf and extension arm previously required for the icemaker assembly.

The parts required to convert the old model to this new model can be ordered as a kit, part number **WR49X10020**. The kit contains 1 lower basket, 1 step shelf, 1 ice bucket, 4 shelf supports and a set of installation instructions.

**NOTE: A service technician must install this kit.**
